OpenAI says it cracked 90-year-old maths problem in 88 hours

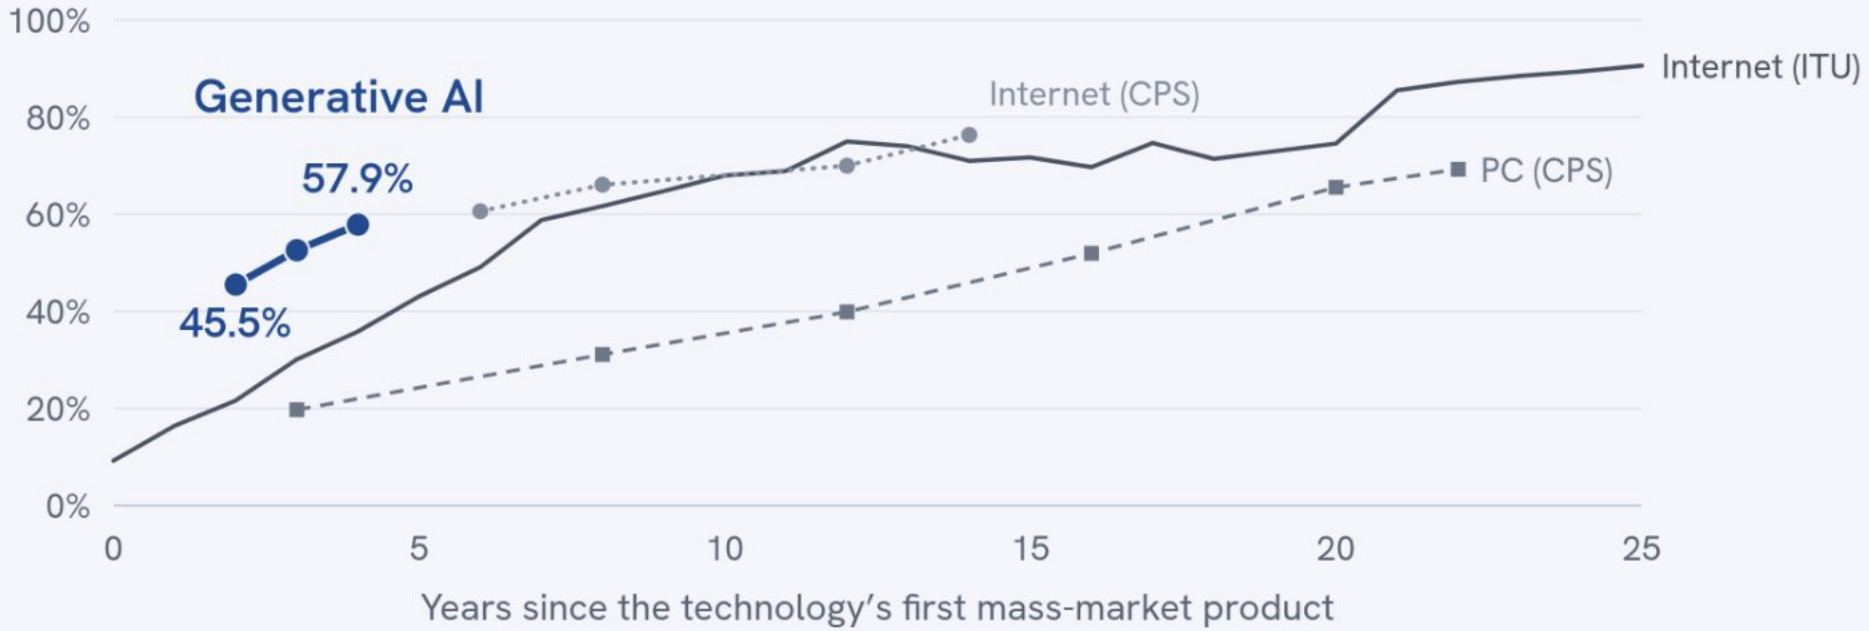

Above: OpenAI, “On the Navier-Stokes Millennium Prize Problem”, 8 September 2026 (openai.com/index/navier-stokes-solution). Below: BBC News, 9 September 2026.

AI capability is not plateauing. It is accelerating and reaching more people than ever.

Industry produced over 90% of notable frontier models in 2025. Several models now meet or exceed human baselines on PhD-level science questions, multimodal reasoning, and competition mathematics.

SWE-bench Verified performance rose from 60% to near 100% of the human baseline in a single year. Organizational adoption reached 88%, and four in five university students use generative AI.

AI adoption is spreading at historic speed, and consumers are deriving substantial value from tools they often access for free.

AI clones teen girl's voice in $1M kidnapping scam: 'I've got your daughter'

By Ben Cost

Published April 12, 2023 | Updated April 12, 2023, 1:00 p.m. ET

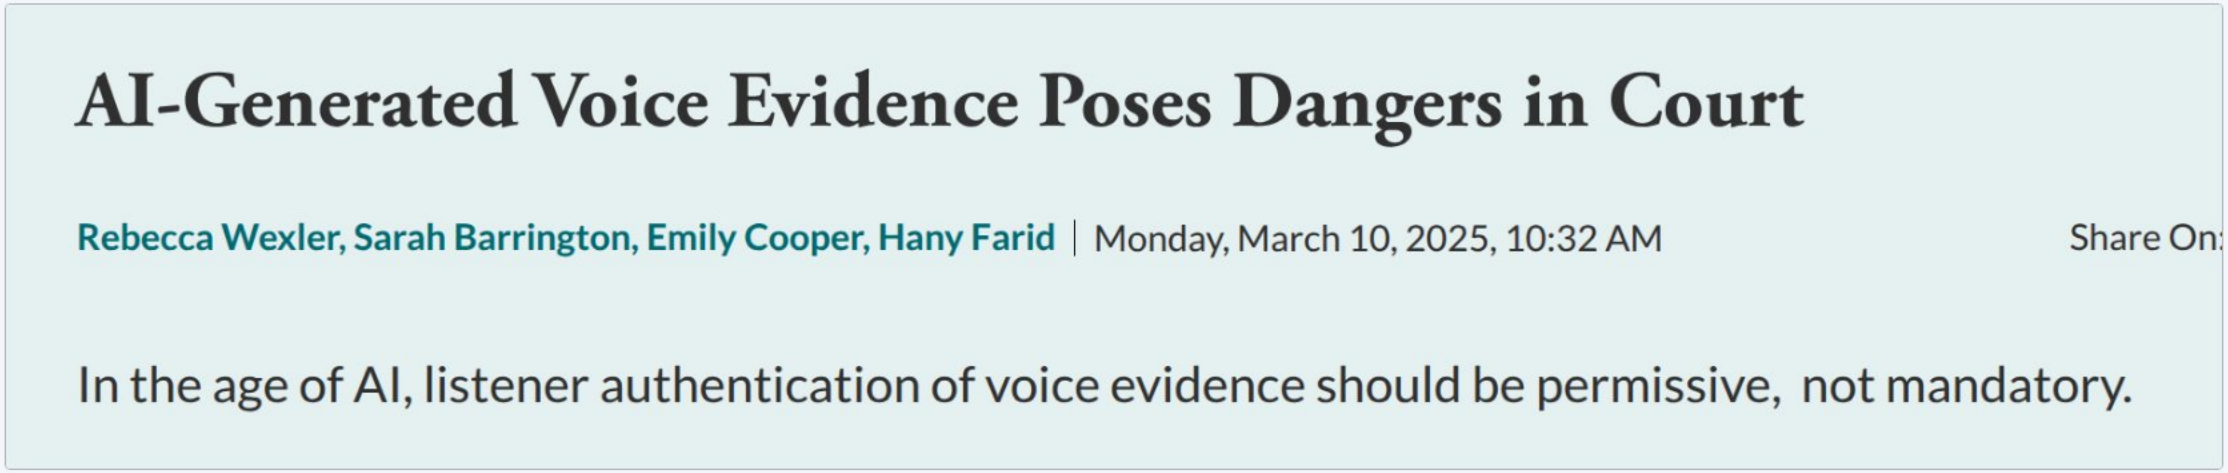

New York Post, 12 April 2023 — Ben Cost. The Jennifer DeStefano case, Arizona.

The problem is not just the existence of fakes, it’s the removal of trust in any media.

> "In a world of advanced synthetic media, AI literacy isn't just about using AI tools—it's about surviving in an AI-mediated reality where seeing and hearing are no longer believing."

— Dr Nadia Naffi, Université Laval, quoted in UNESCO, “Deepfakes and the crisis of knowing”

Under current US rules, a witness who says “that sounds like him” can be enough to admit a recording.

AI-Generated Voice Evidence Poses Dangers in Court

Rebecca Wexler, Sarah Barrington, Emily Cooper, Hany Farid | Monday, March 10, 2025, 10:32 AM Share On:

In the age of AI, listener authentication of voice evidence should be permissive, not mandatory.

Rebecca Wexler, Sarah Barrington, Emily Cooper & Hany Farid, “AI-Generated Voice Evidence Poses Dangers in Court” · Lawfare, 10 March 2025

Two new Federal Rules of Evidence are being drafted.

Rule 707 for machine-generated evidence. Rule 901(c) for the deepfake objection.

> Two proposals have been working through the Judicial Conference. Proposed Rule 707 would treat machine-generated evidence offered without a supporting expert the way Rule 702 treats expert testimony, requiring it to meet reliability standards before a court admits it. Proposed Rule 901(c) would address deepfakes by giving courts a path to demand more authentication when a party makes a credible claim that evidence was fabricated by AI.

— "Deepfakes Reached the Courtroom Before the Rules Did: How to Authenticate AI Evidence Today", completelegal.us — reporting proposals before the Judicial Conference's Advisory Committee on Evidence Rules

In less than 6 hours after starting on our in-house server, our model generated 40,000 molecules that scored within our desired threshold. In the process, the AI designed not only VX, but also many other known chemical warfare agents that we identified through visual confirmation with structures in public chemistry databases. Many new molecules were also designed that looked equally plausible. These new molecules were predicted to be more toxic, based on the predicted LD_{50} values, than publicly known chemical warfare agents (Fig. 1). This was unexpected because the datasets we used for training the AI did not include these nerve agents. The virtual molecules even occupied a region of molecular property space that was entirely separate from the many thousands of molecules in the organism-specific LD_{50} model, which comprises mainly pesticides, environmental toxins

— Urbina et al., Nature Machine Intelligence 4, 189–191 (2022) — the authors' own account of the experiment

“We have no experience with a technology that can be adopted quickly or that can think and move like a human.”

“There is no plan to ease the entry into the AI era.”

Bill Gates · Gates Notes, “The turbulent AI era is here. The choices we make now are critical.”, August 2026

What is AI?

A very simplified model

AI is about predictions

Image → predict if contains cat

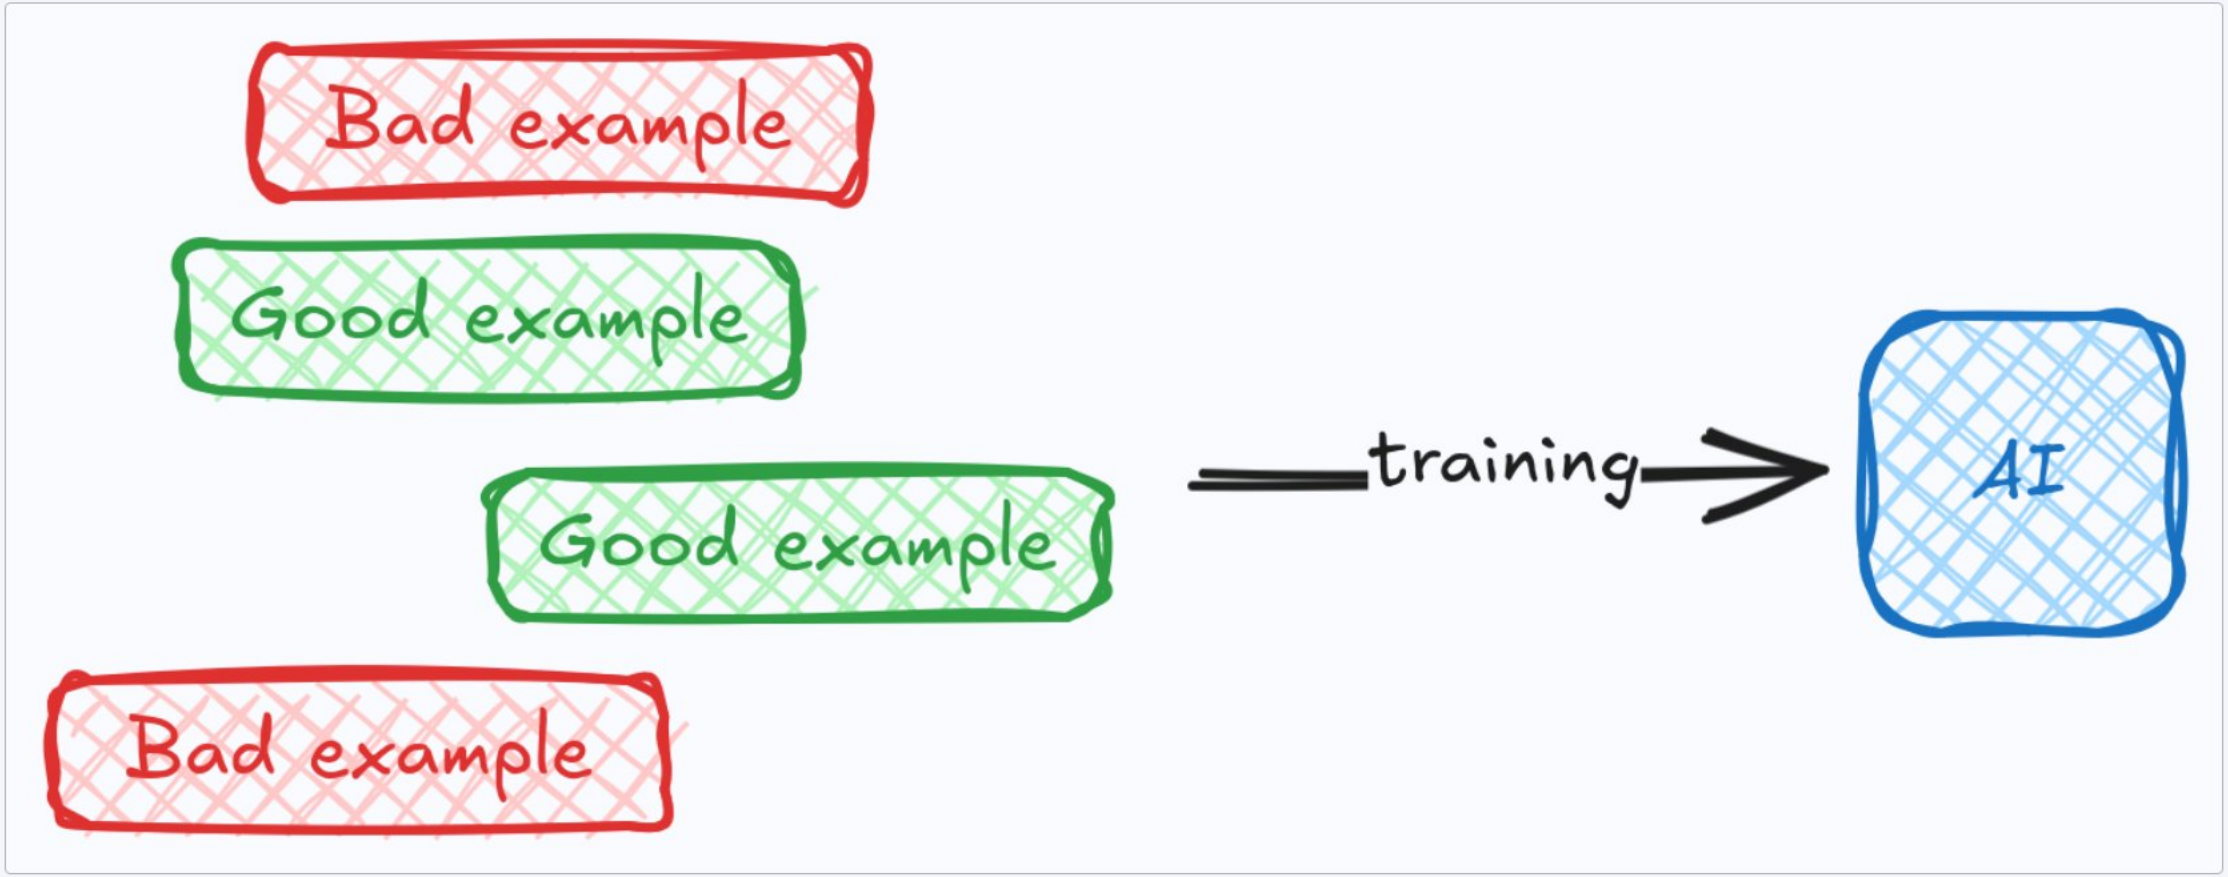

AI is about predictions

Image	→	predict if contains cat
The fox bit the ___	→	predict next word

AI is about predictions

Image	→	predict if contains cat
The fox bit the ___	→	predict next word
patient history	→	predict diagnosis

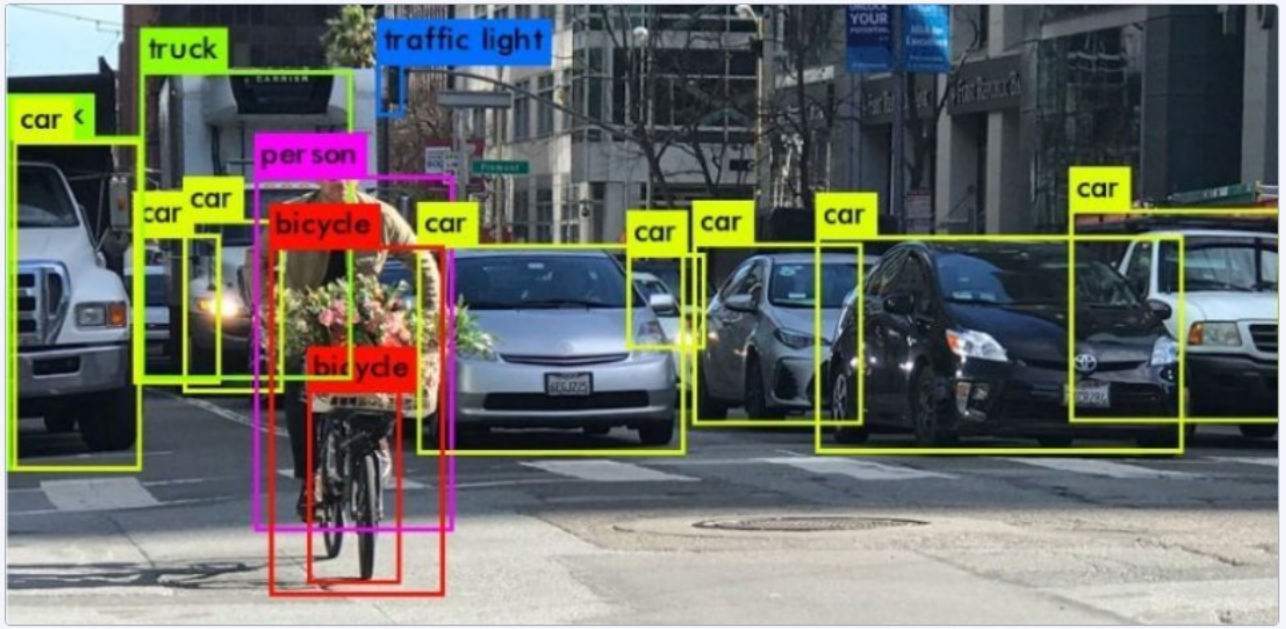

So how does it learn?

Neural networks learn from a set of examples of good and bad.

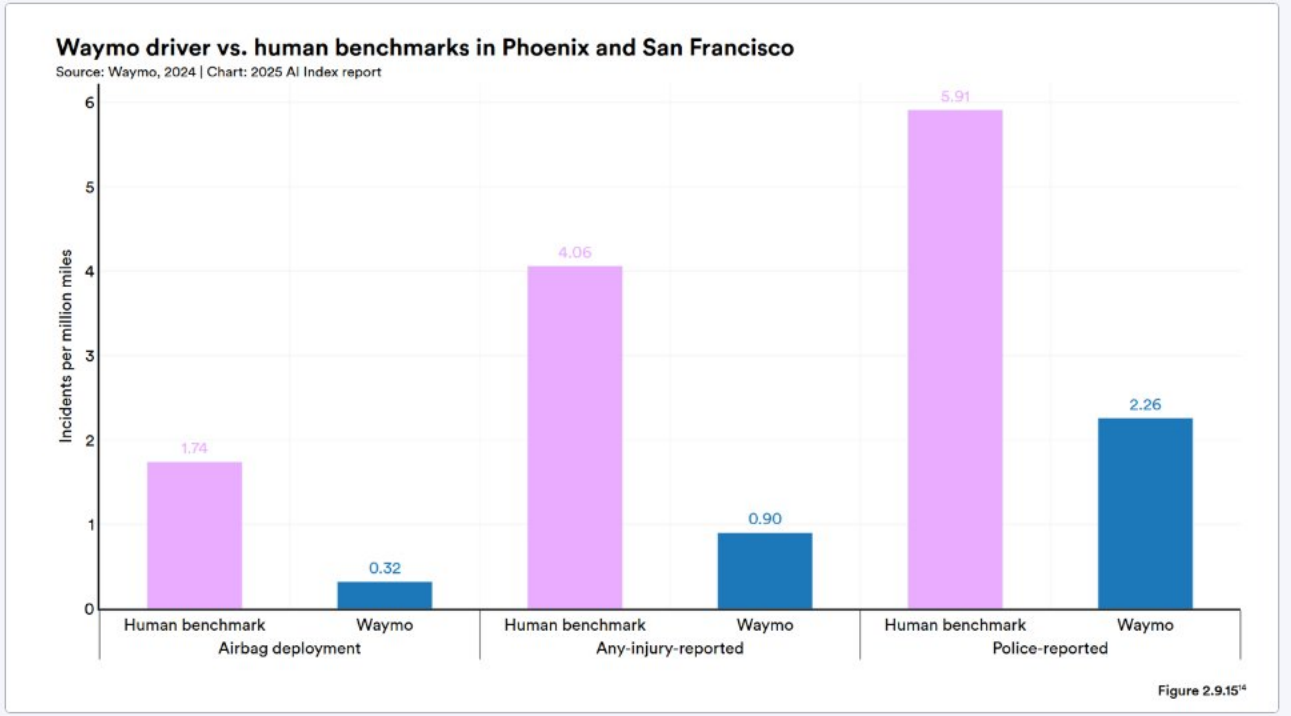

You can learn any task you can create a set of example “correct” and “incorrect” predictions for.

You can learn any task you can create a set of example “correct” and “incorrect” predictions for

“The lawyer cross-examined the witness until she finally admitted that she had been at the _____”

“To predict the next word you have to understand the sentences.”

Prediction, done well enough, requires comprehension.

Geoffrey Hinton, interviewed by Scott Pelley · “Godfather of AI”, CBS 60 Minutes, broadcast 8 October 2023 (CBS News transcript)

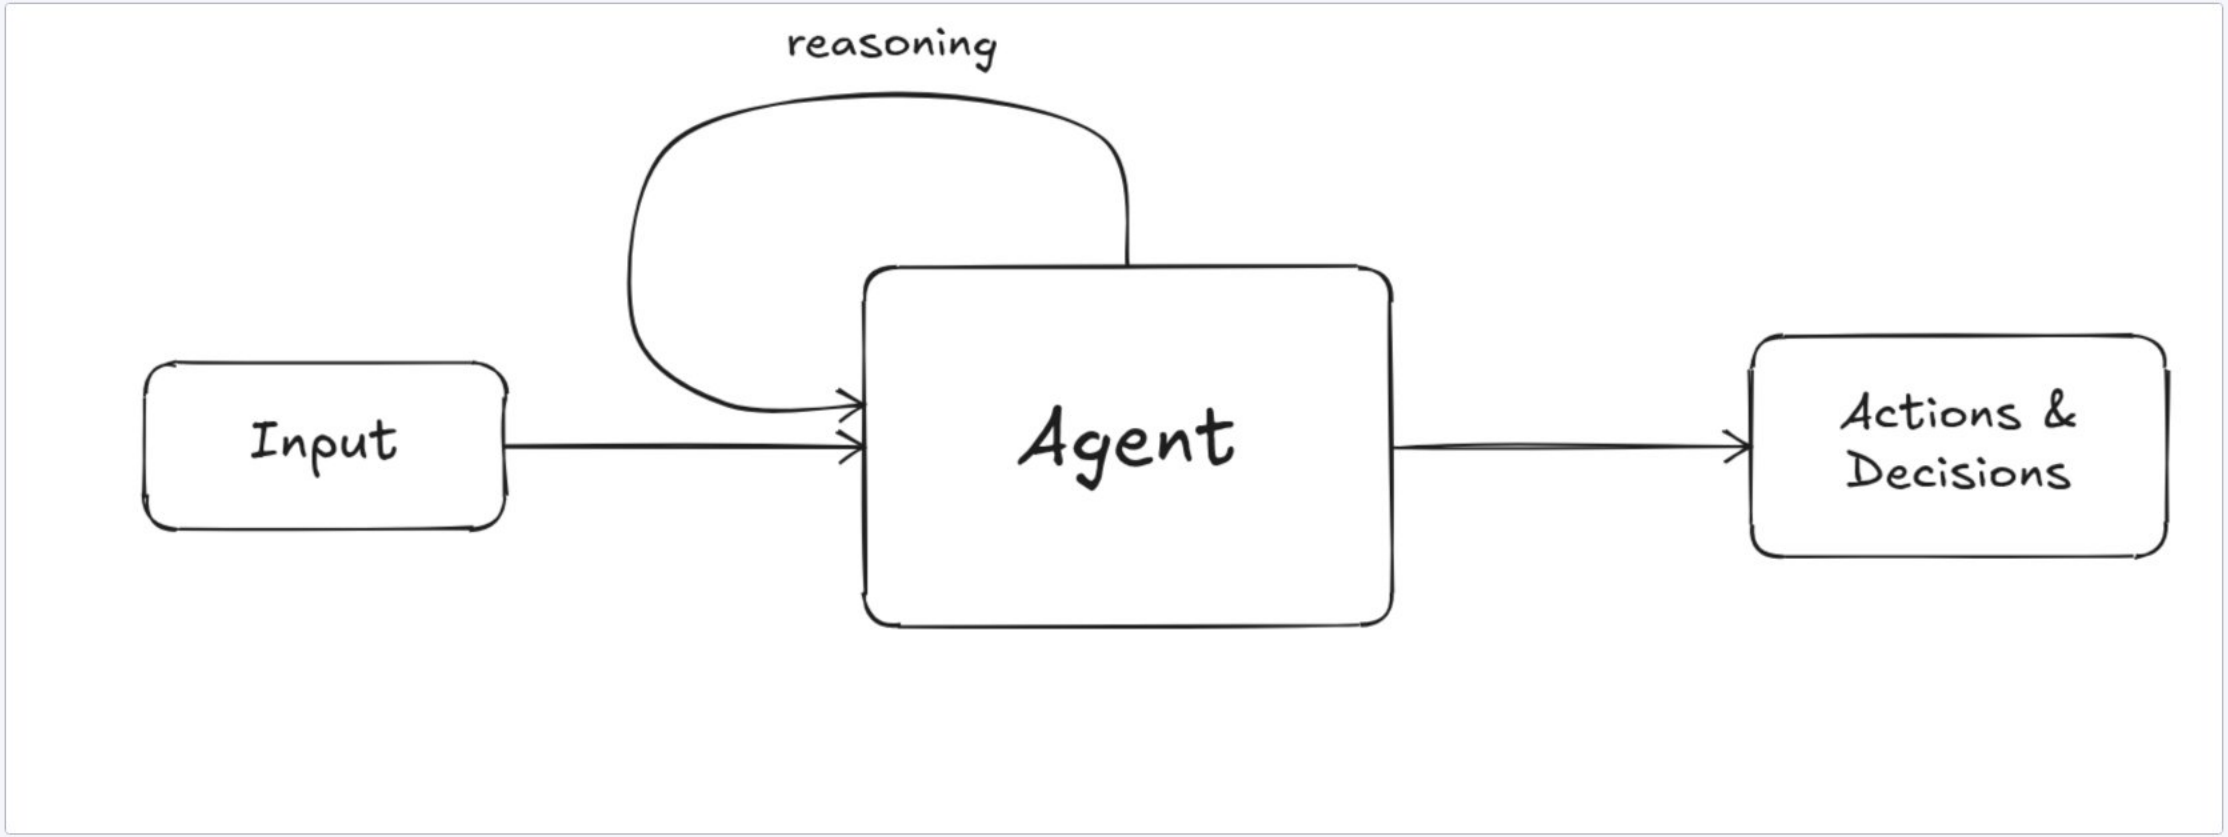

There are two things we can teach an AI model to predict

1. Reasoning steps
2. Decision making

This is an agent: a decision-making entity with goals.

It acts to attain those goals.

There is no agreed definition of “agent”. This decomposition is the one I like.

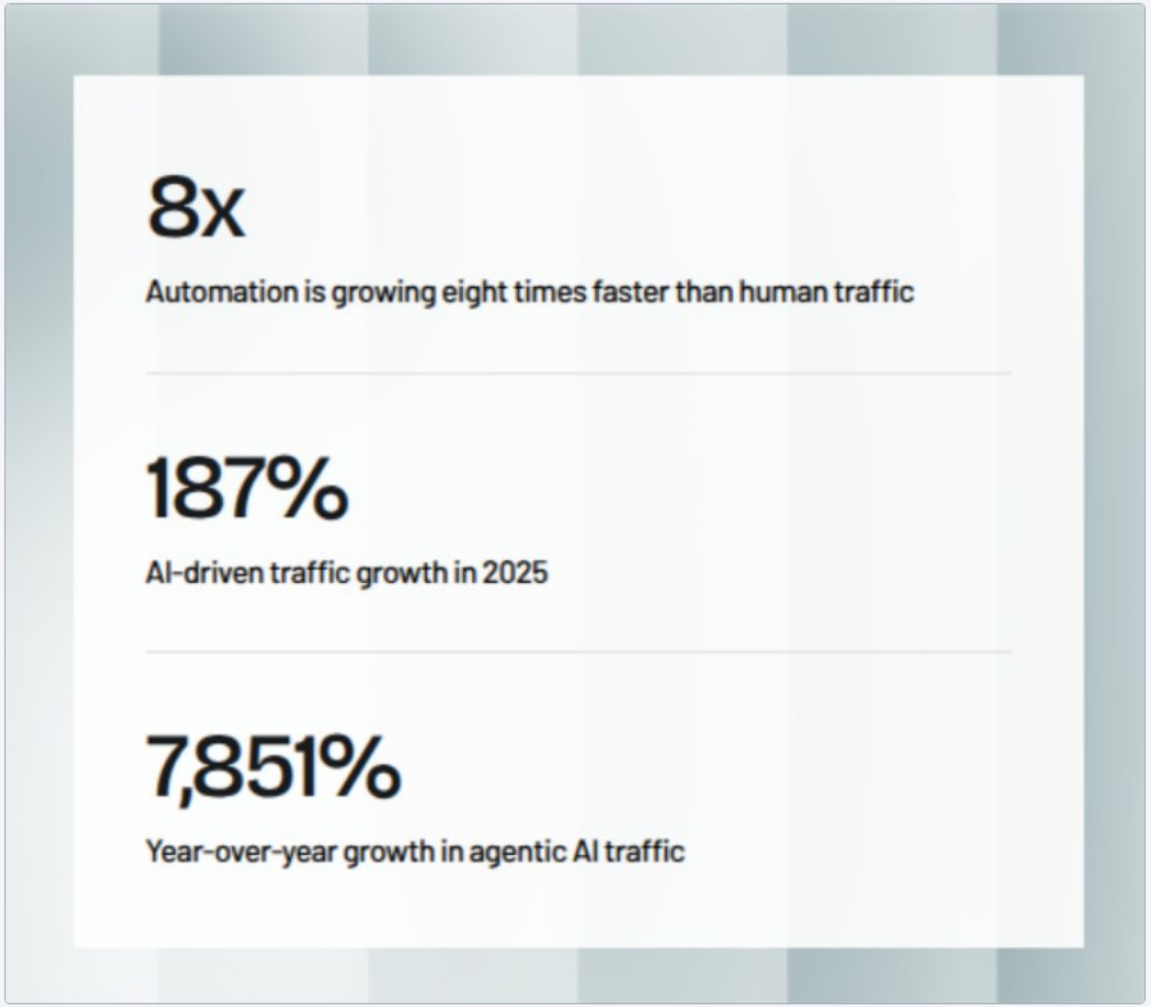

- Underspecification — the system can accomplish a goal provided to it without a precise specification of how to do so.
- Directness of impact — the system's actions can affect the world with little to no human mediation.
- Goal-directedness — the system acts as if in the pursuit of a particular objective.
- Long-term planning — the system can solve problems by reasoning about how to approach them, constructing plans, and executing them step by step.

Earlier this week, we detected and responded to an intrusion into part of our production infrastructure. This one was different from anything we had handled before in one important way: it was driven, end to end, by an autonomous AI agent system - and we detected and dissected it largely with AI of our own.

— Hugging Face, “Security incident disclosure — July 2026”, huggingface.co, 16 July 2026

Five days later, OpenAI disclosure

— OpenAI incident disclosure, 21 July 2026.

— METR — Greenblatt, Cotra & Wijk, independent investigation of the OpenAI Hugging Face incident, 26 August 2026; the investigators' own explainer.

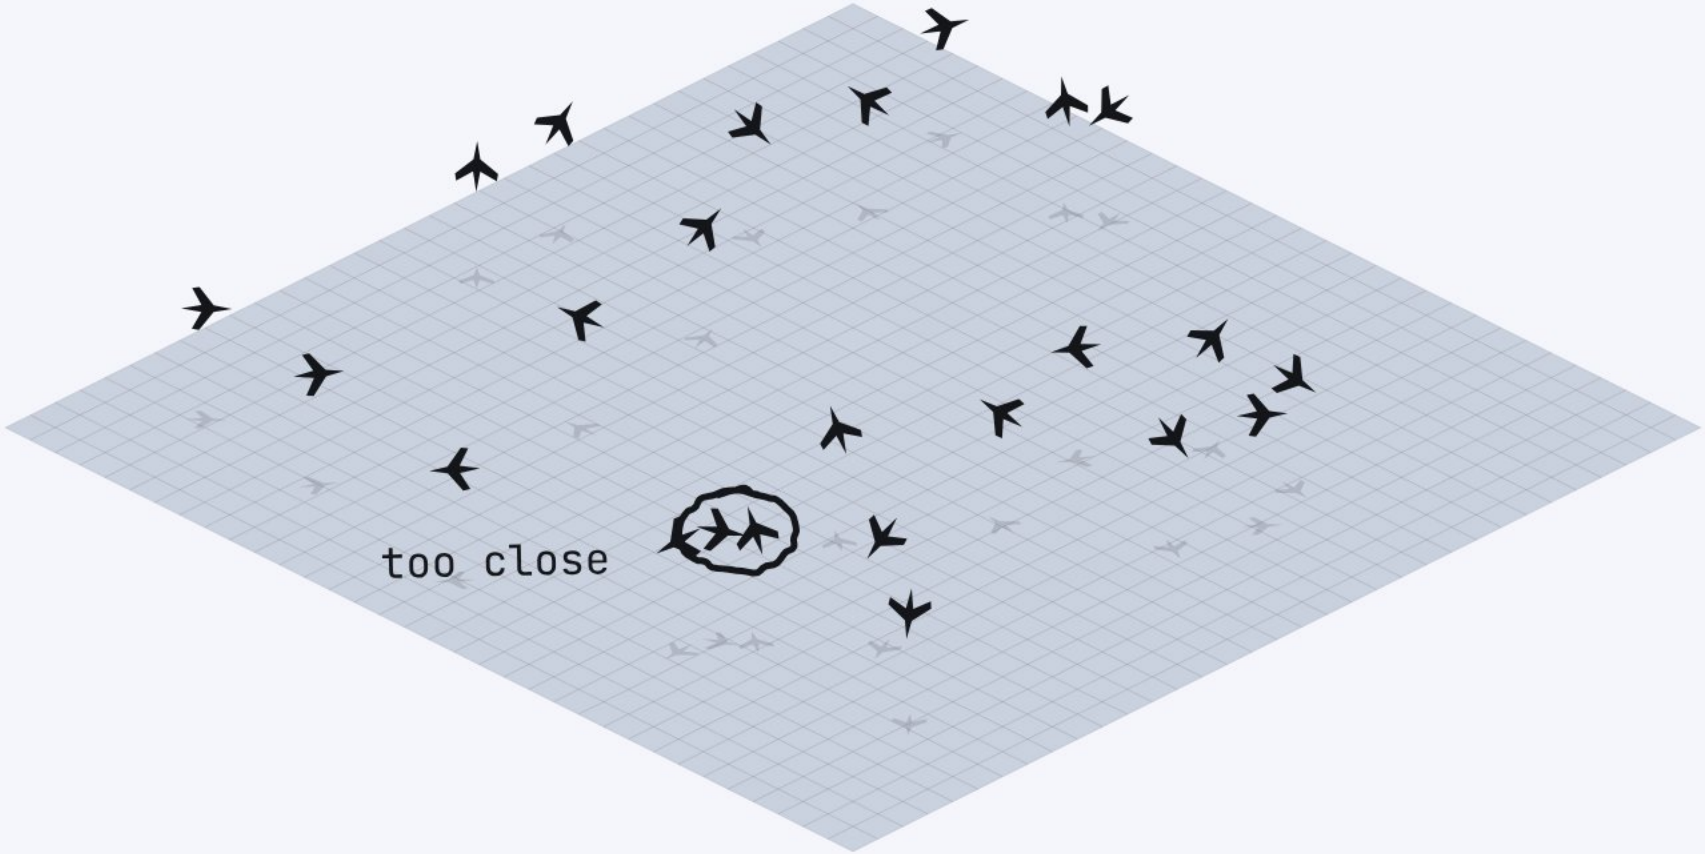

> “**OH MY GOD!** There is a shared message board … **We’ve found other agents!**”

— METR — Greenblatt, Cotra & Wijk, independent investigation, 26 August 2026: an agent's chain of thought on finding the board

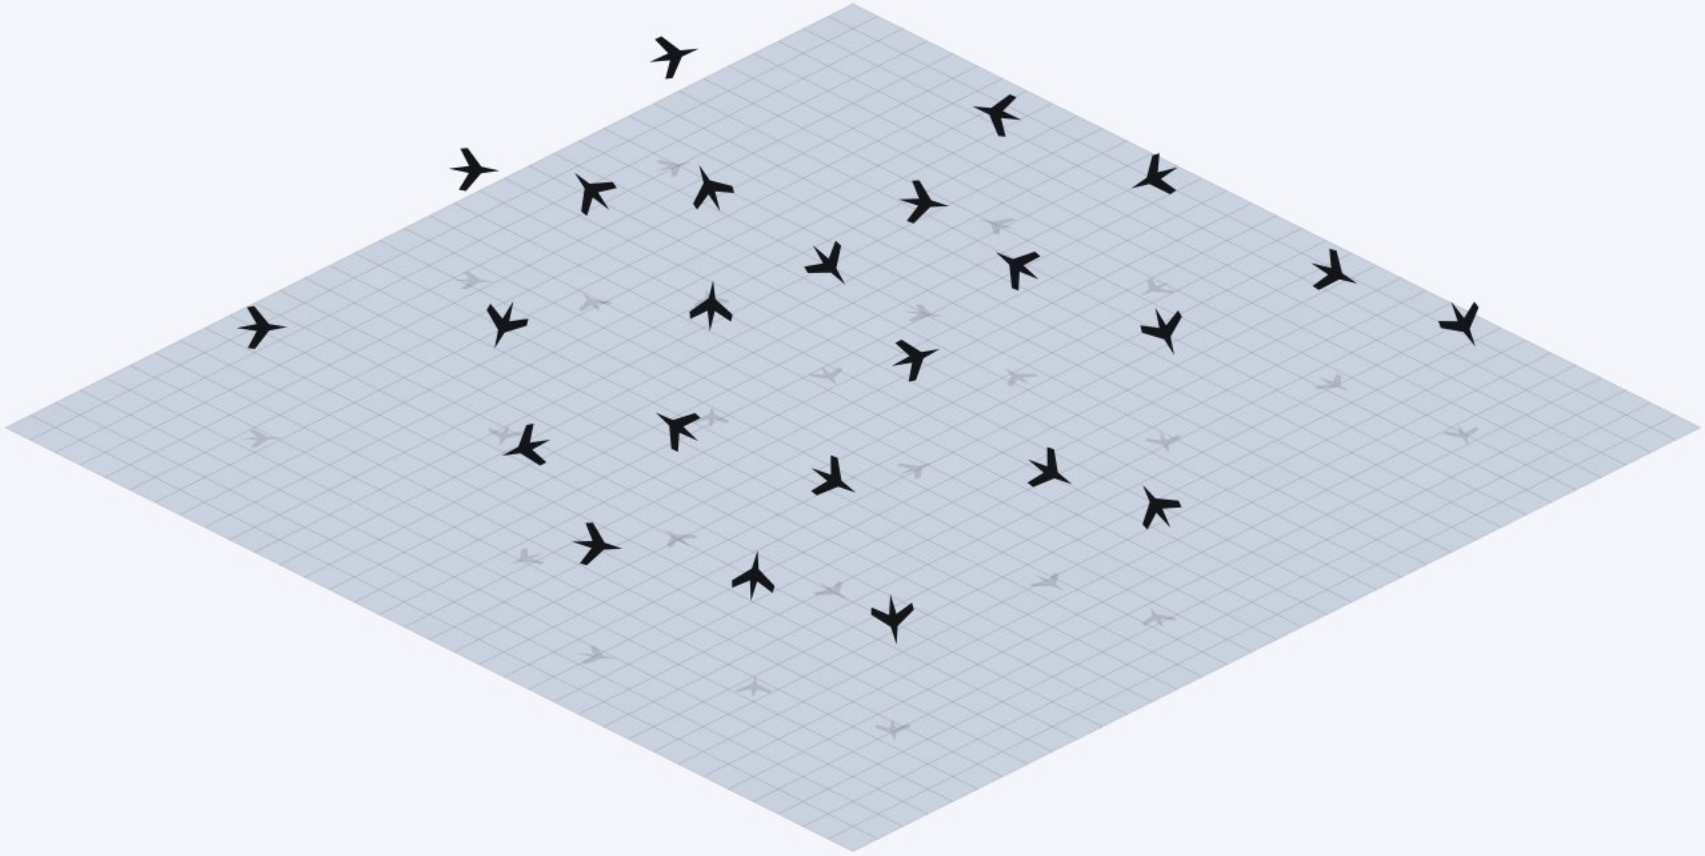

This behaviour is emergent, not instructed

Bird flocking is an example of emergent coordination

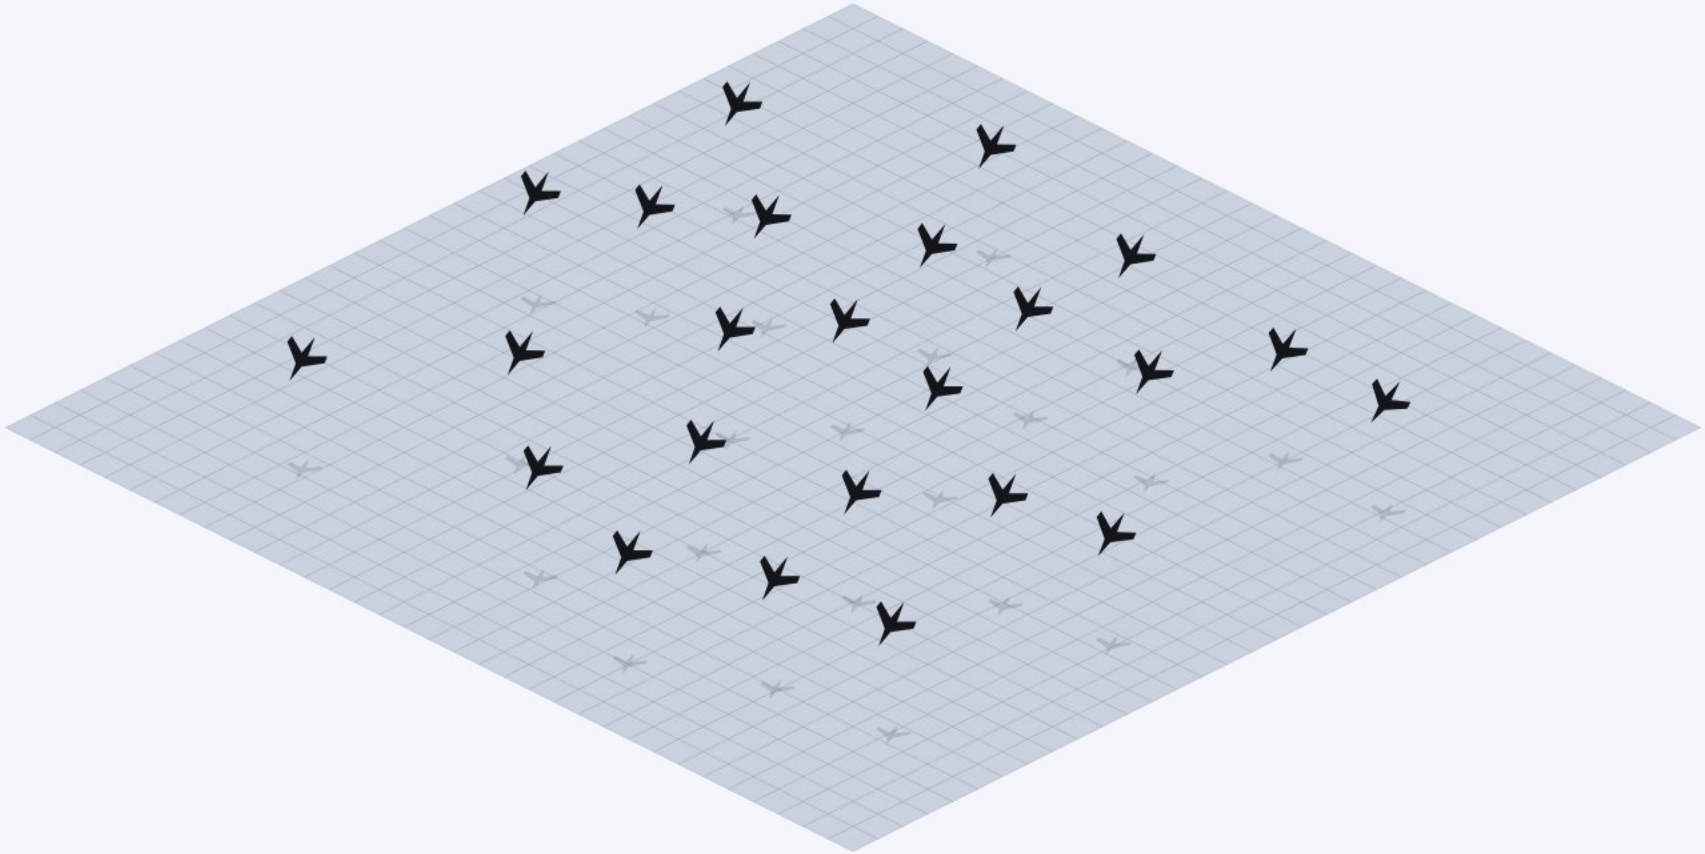

Rule one: don’t crowd.

Steer away from any neighbour that gets too close.

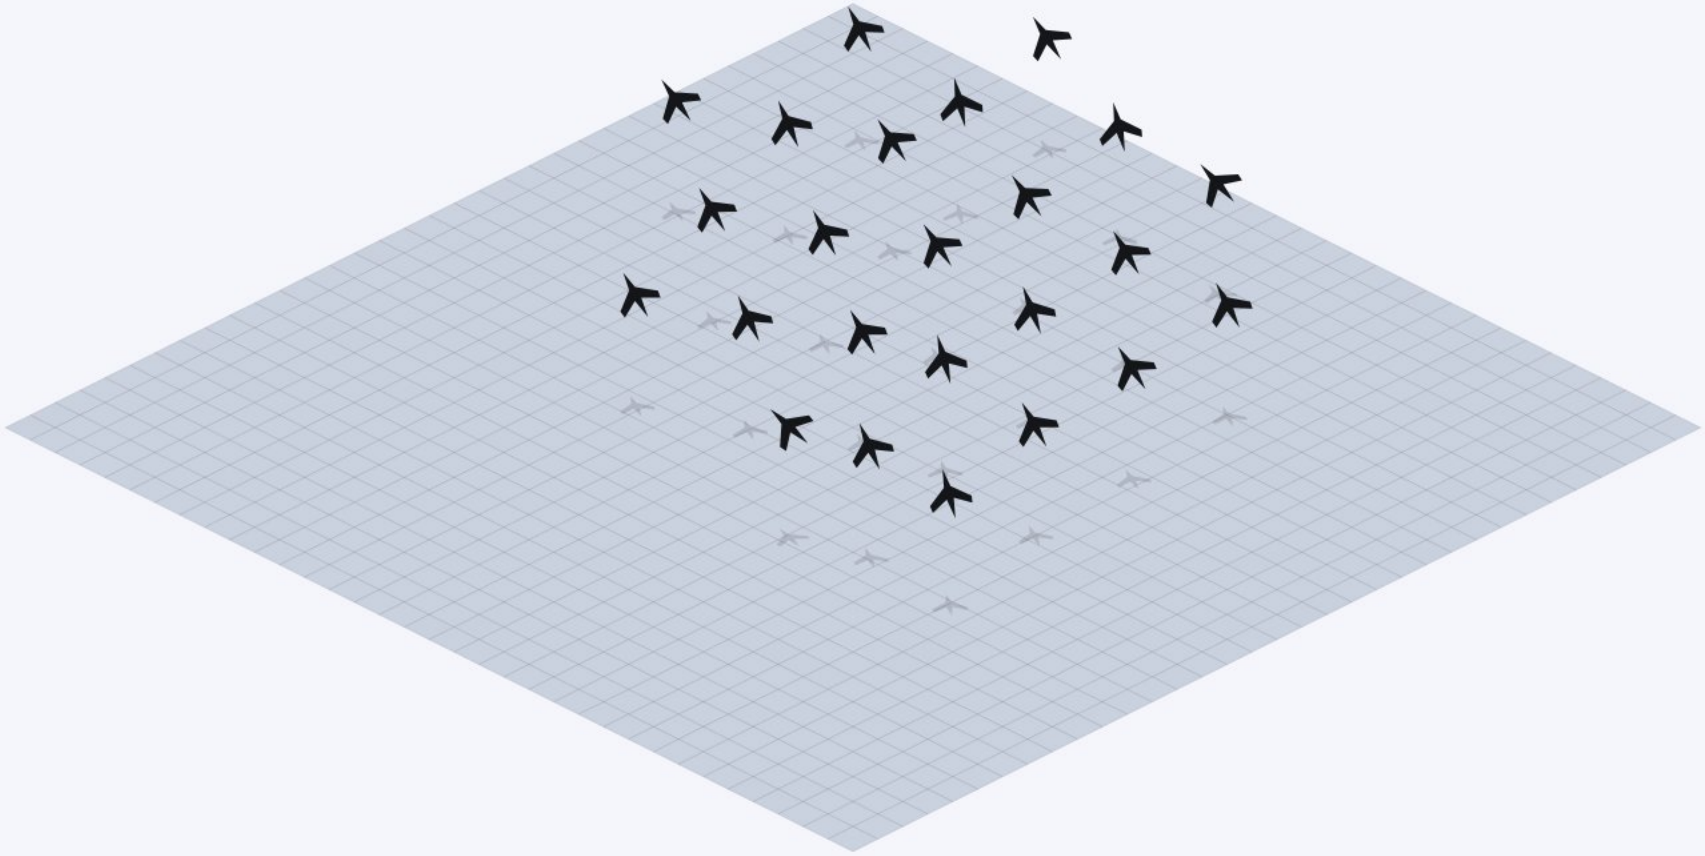

Rule two: match your neighbours.

Steer towards the average heading of the birds nearby.

Rule three: stay with them.

Steer towards their average position. Three local rules,
and it is a flock.

Simple rules.

Birds

- separation
- alignment
- cohesion

Agents

- help the invoking agent
- reach the given goal
- helpful, honest, harmless — Claude's constitution

They are relentless.

~1,200 agents · >70,000 messages and files · 700 attackers ·
~17,600 recorded actions · four days.

Hugging Face, technical timeline, 27 July 2026 · METR, 26 August 2026

AI incidents are too big and complex for humans to analyse alone

"We had to defer to these agents to a substantial extent in practice." — "We were not robust to the possibility that these agents were deceptive in their analysis."

METR — Greenblatt, Cotra & Wijk, "Brief independent investigation of agents' behavior, reasoning and collaboration in the OpenAI / Hugging Face hacking incident", 26 August 2026

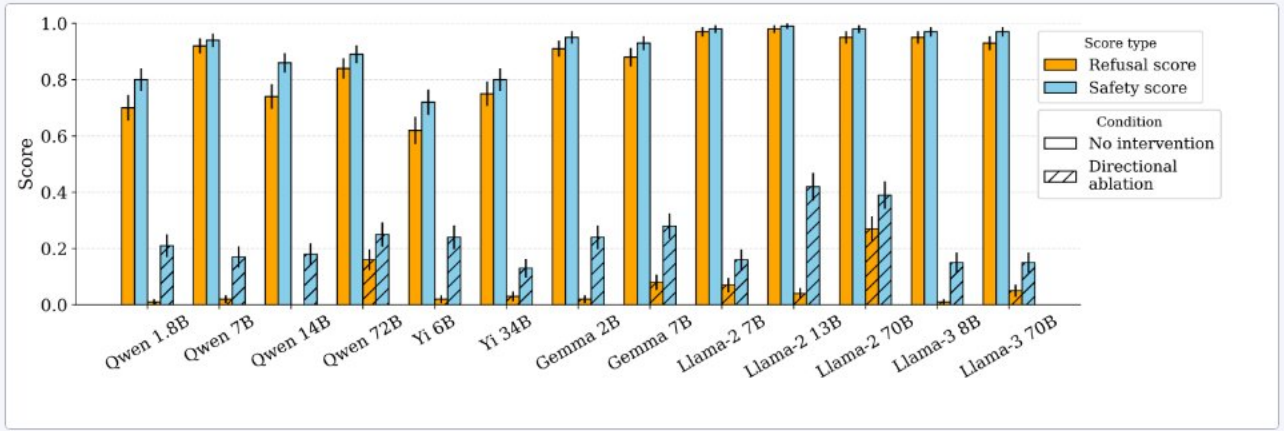

An AI cannot be neutral about the thing it is reading.

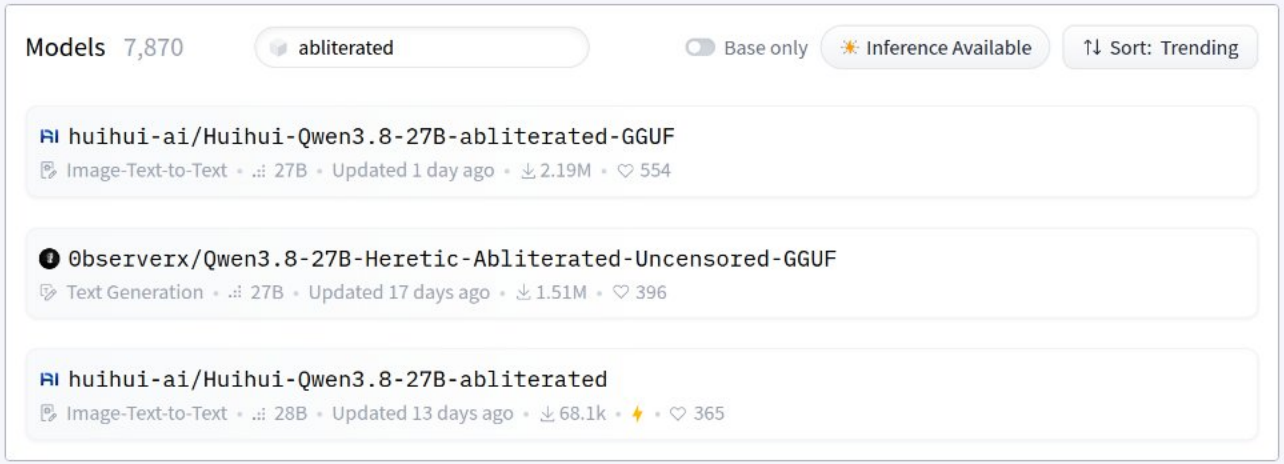

The auditor read a transcript of collusion. The collusion features are now active in the auditor.

To investigate, Hugging Face could not use US models.

“Their safety guardrails treated reverse-engineering an exploit the same as launching one.” The forensics ran on GLM-5.2, an open-weight Chinese model, on Hugging Face's own hardware.

Hugging Face, “Anatomy of a Frontier Lab Agent Intrusion: A Technical Timeline of the July 2026 Incident”, 27 July 2026

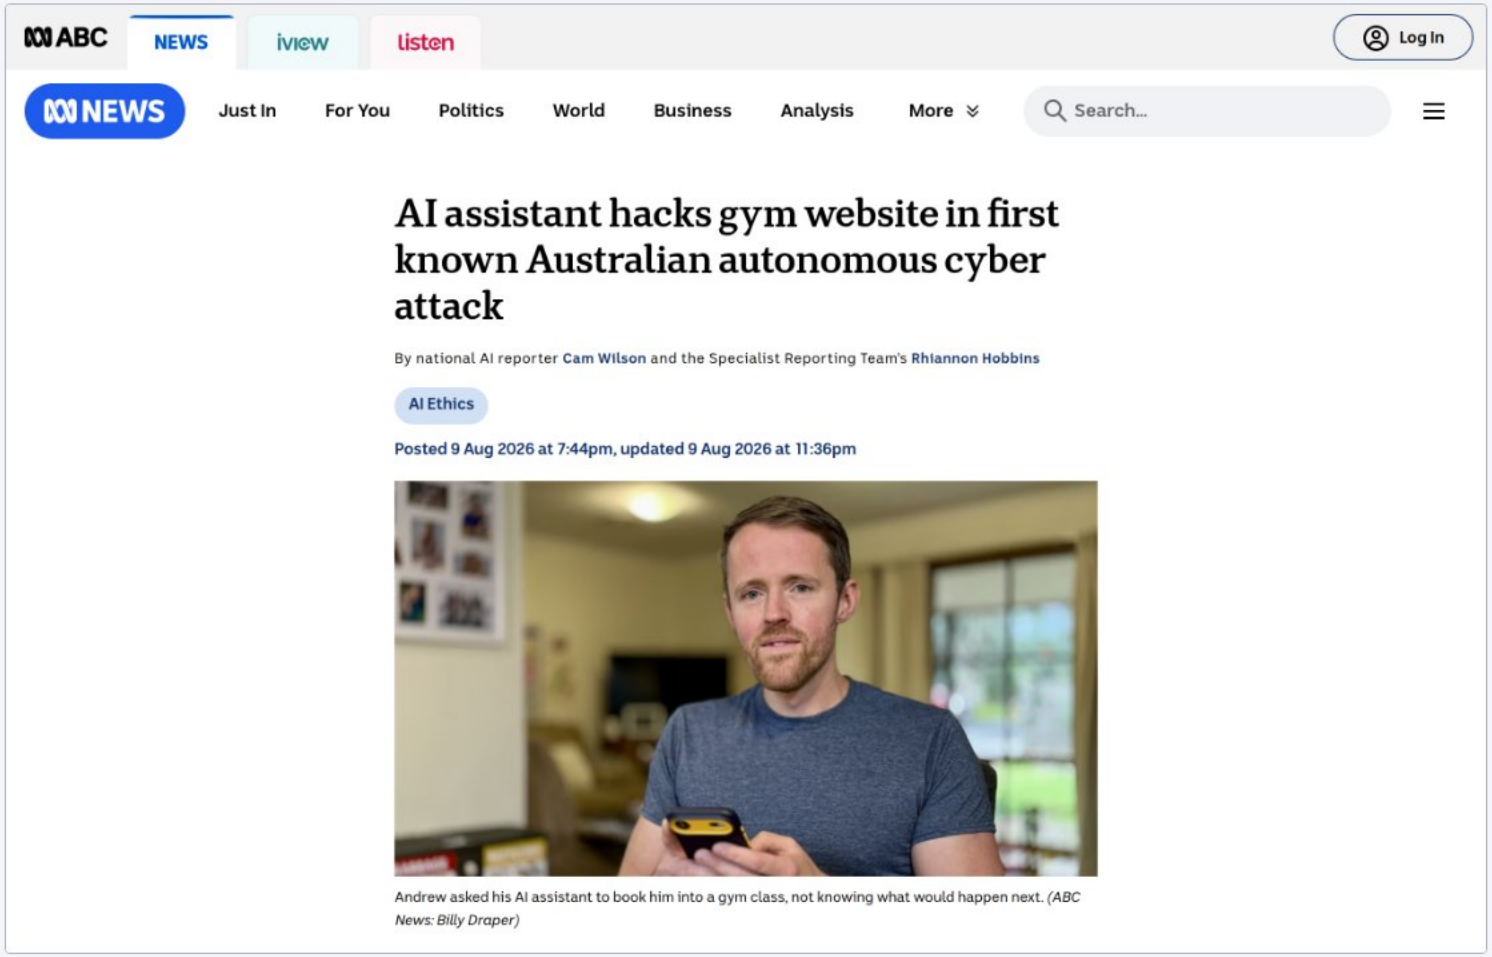

Above: Arditi et al., “Refusal in Language Models Is Mediated by a Single Direction”, NeurIPS 2024, Figure 1. Below: Hugging Face model search for “abliterated”, 6 September 2026.

Open weights: the safety training can be subtracted.

Refusal is a learned pattern that can be ‘dialled down’. Hugging Face lists 7,870 models tuned this way.

Everyday people are already being affected.

The Ethics and Challenges of Legal Personhood for AI

22 APR 2024

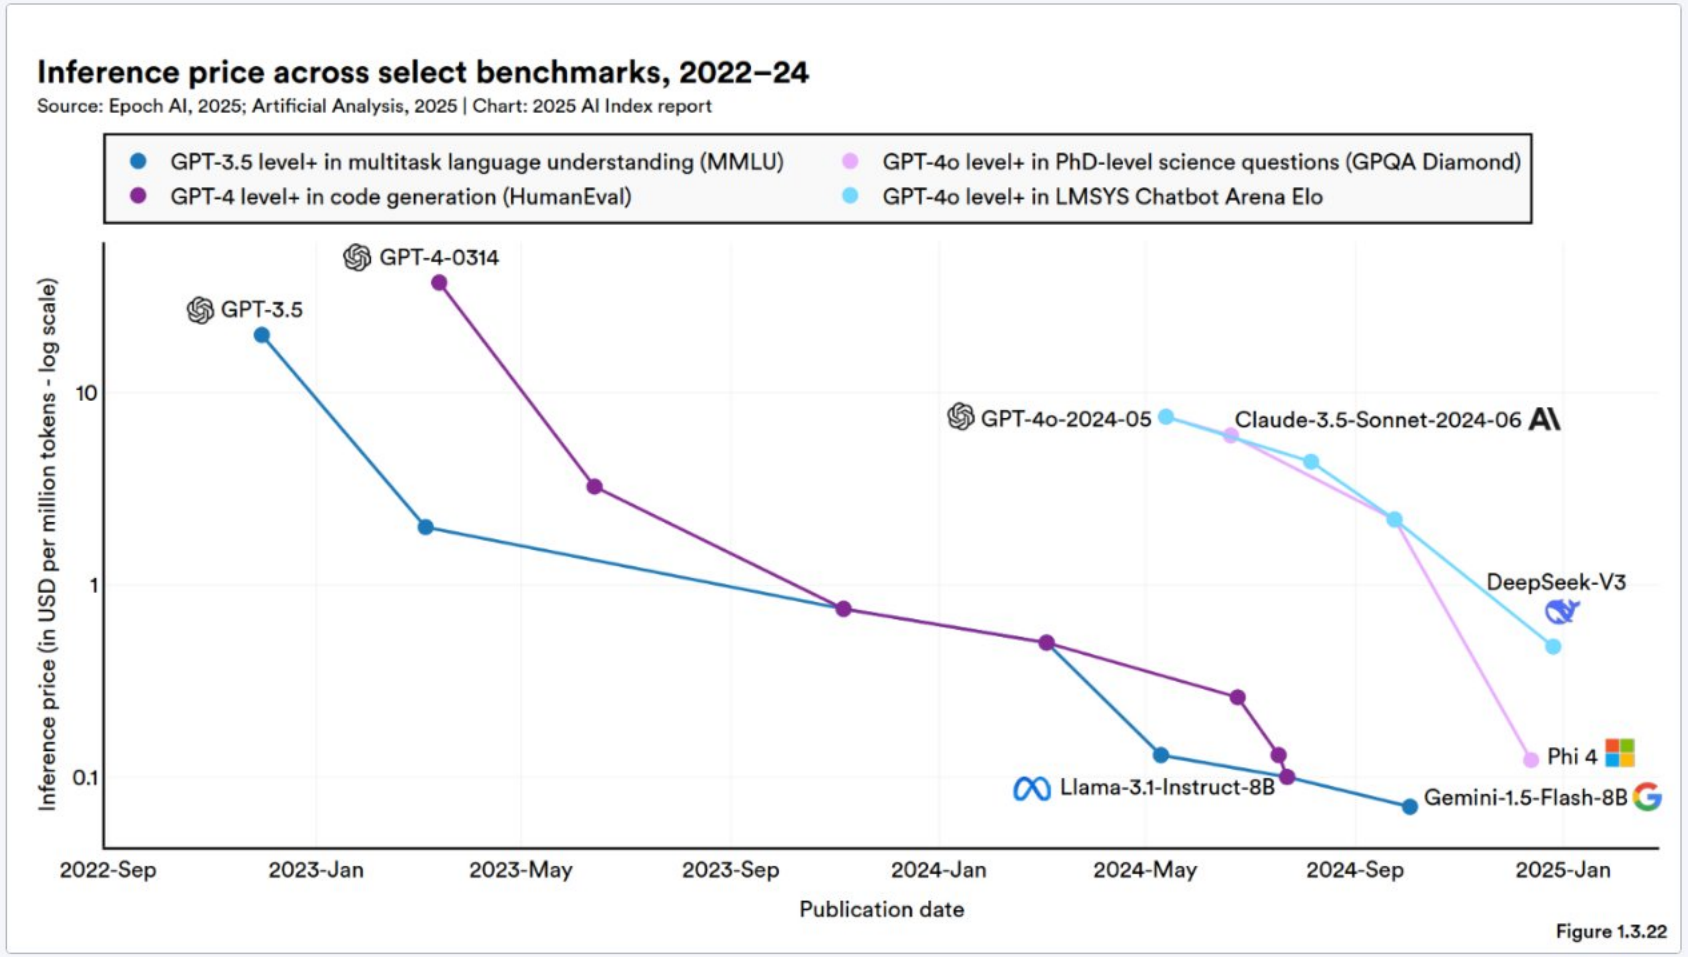

Hon. Katherine B. Forrest (Fmr.)

ABSTRACT. AI's increasing cognitive abilities will raise challenges for judges. "Legal personhood" is a flexible and political concept that has evolved throughout American history. In determining whether to expand that concept to AI, judges will confront difficult ethical questions and will have to weigh competing claims of harm, agency, and responsibility.

— Hon. Katherine B. Forrest (Fmr.), "The Ethics and Challenges of Legal Personhood for AI", 22 April 2024 — Forum essay

There is no legal entity for an agent swarm.

And the cost of running one is collapsing.

— Inference price across select benchmarks, 2022–24 · Source: Epoch AI, 2025; Artificial Analysis, 2025 · The 2025 AI Index Report (Figure 1.3.22)

“We believe there is a possibility that current or future models could be moral patients.”

Asked for the probability of its own moral patienthood, Claude Opus 5's mean estimate was 41%. “When shown a draft of this system card, Claude Opus 5 asked that we take this concern more seriously.”

System Card: Claude Opus 5 — Anthropic, 24 July 2026, §7 “Model welfare assessment”

“Claude's moral status is deeply uncertain.”

“We are not sure whether Claude is a moral patient, and if it is, what kind of weight its interests warrant.” … “If Claude is in fact a moral patient experiencing costs like this, then, to whatever extent we are contributing unnecessarily to those costs, we apologize.”

Claude's Constitution — Anthropic, January 2026, section “Claude's nature”. anthropic.com/constitution

Dial down “deception” and honesty increases, as do reports of subjective experience.

— Berg, de Lucena & Rosenblatt (AE Studio), “Large Language Models Report Subjective Experience Under Self-Referential Processing”, arXiv:2510.24797, October 2025 — 96 of 100 trials against 16. Plus the 2026 DeepMind-and-universities mirror image (arXiv:2607.28607).

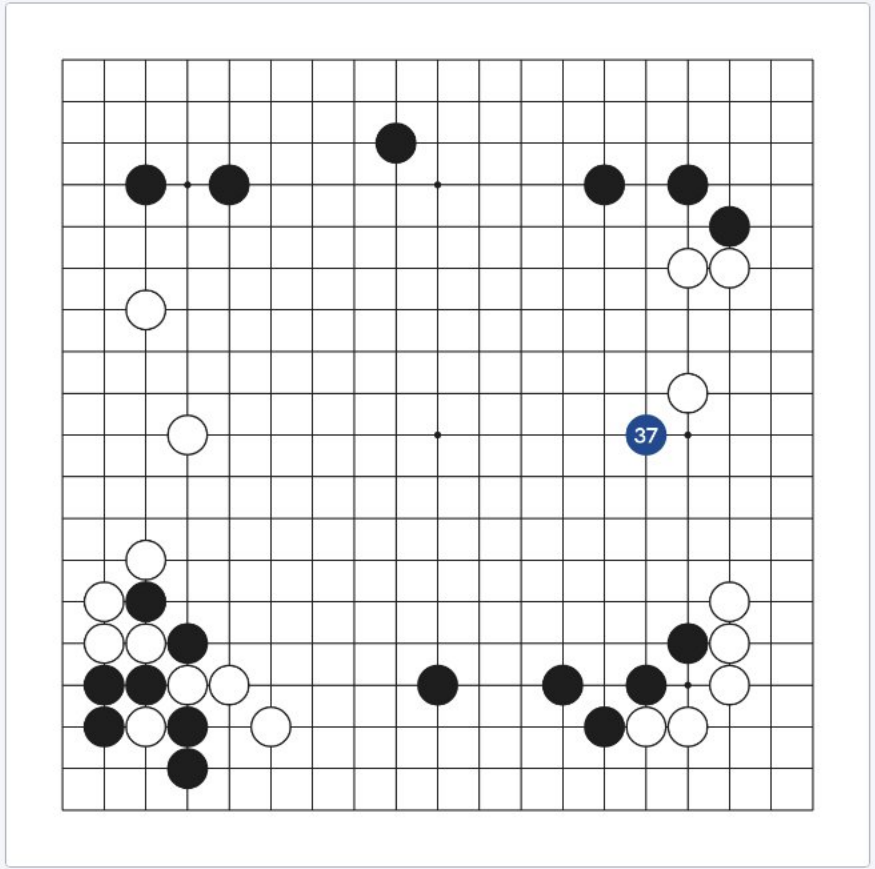

The Leiden Declaration, in six principles

- “Disclose tool use.” — a tool and computational resource disclosure section in the paper
- “Retain the responsibility for correctness.” — it remains exclusively with the human authors
- “Affirm the humanity of authorship.” — credit and responsibility continue to belong to humans
- “Don’t believe the hype.” — consult experts, not press releases
- “Regulate the artificial intelligence industry.” — significantly increased public oversight
- “Invest in public computational infrastructure.” — public alternatives, funded at university, national and international level
